# SUMMARY REPORT

## SuperEarn Web & Smart Contracts

REPORT CREATED

**21.07.2026**

DURATION

**27.05.2026 - 01.07.2026**

PREPARED BY

**HackenProof team**

This report was prepared for the SuperEarn Web & Smart Contracts bug bounty program

The report contains information about participants, in-scope targets as well as information about vulnerabilities found and fixed in the program scope

|             |                          |
|-------------|--------------------------|
| Approved by | HackenProof Team         |
| Name        | SuperEarn Summary Report |
| Type        | Web, Smart Contracts     |
| Timeline    | 27.05.2026 - 01.07.2026  |

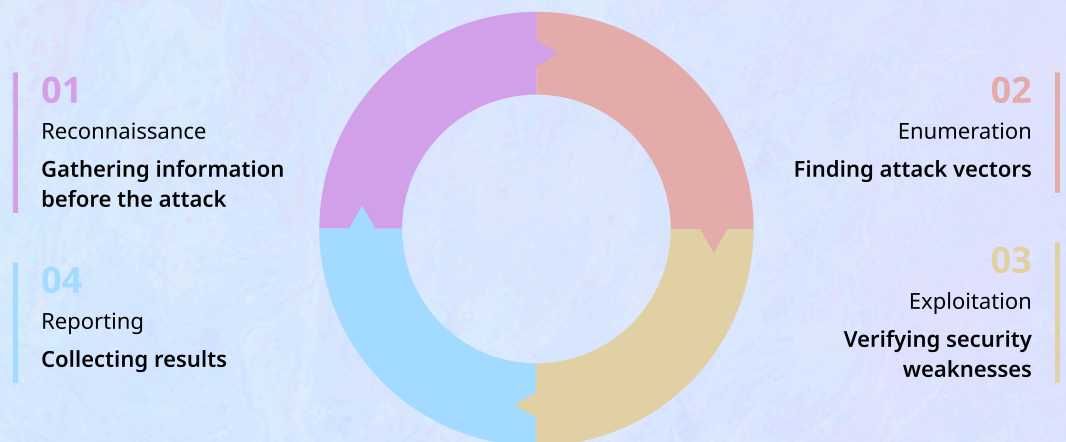

# BUG BOUNTY METHODOLOGY

This part typically details the end-to-end process from the initiation of the program, the discovery of vulnerabilities, the submission of findings, to the validation and remediation stages.

## BUG HUNTERS

The lifecycle of finding vulnerabilities can be divided into the following four phases:

Researchers from HackenProof, who conduct testing and vulnerability assessments for web applications, smart contracts, and blockchain infrastructure, typically adopt numerous methodologies. These methods align with the outlined workflow.

# CONCLUSION

---

## ABOUT BUG BOUNTY PROGRAM

The Bug Bounty Program does not provide guarantees or warranties regarding the absolute security. It is not a definitive assessment of its reliability, safety, or bug-free status

While the program helps identify potential vulnerabilities, it should not be relied upon as the sole security measure. We strongly recommend combining it with independent security audits and continuous testing to ensure the highest level of protection for your project.
